Assessment Task 01

Question 1

Miss Botha at Sedibeng College needs to determine whether her PLP students have passed can proceed to NCV Level 2.

Develop a program that calculates the student's final mark and determine if the student proceeds to NCV Level 2 or not.

Final mark calculation is as follows	Qualification status is determined by
30% of Icass Mark 40% of Practical Assessment 30% of Examination	Final mark 50% or higher Leaner Passed. You have to NCV Level 2 Final mark below 50% Learner Failed.

Use the following data for testing your program.

Test Data	Expected Result	Actual Result
Name: funeka sobopha **Icass mark: 50** **Practical test: 50** **Exam mark: 50**	Your final mark is : 50 % Funeka Sobopha You have qualified for NCV Level 2	
Name: sonto gama **Icass mark: 30** **Practical test: 12** **Exam mark: 50**	Your final mark is : 30% Sonto Gama Unfortunately, You have not qualified for NCV Level 2	

Show all processes from planning until execution. **(20)**

Question 2

Consider the following code:

```
mark = int ("20 percent")
```

Will this statement excute successfully? Support your answer by explain how python interprets string values when converting to integers. (5)
