Assessment Task 1 Marking Guideline

Question 1

Planning (IPO)

Input	Process	Output
30% of Icass Mark 40% of Practical Assessment 30% of Examination ✓	Read the students details and the 3 marks✓ - Multiply Icass mark by 0.3 - Multiply Practical Assignment mark by 0.4 - Mutliply internal exam by 0.3 Calculate Final mark by adding different marks together✓	Display ✓ Student name Final mark 50% or higher Leaner Passed. Final mark below 50% Learner Failed.

Mark Allocation

Input 1 mark✓

Process

- Multiply marks✓
- Adding final mark✓

Outputs

Display of correct messages ✓

#Program that calculates the students PLP marks for entry into Ncv courses
 	
#declaring variables and getting values from the user
name= input("Enter name: ")
icass_mark = input("Enter the Icass Mark: ")
practical_test = input("Enter the Practical Test: ")
exam_mark = input("Enter the exam mark: ")
 	
nameCleared = name.strip().title() #cleaning the text
 	
#check that the correct values are entered
if name =="" or name.isdigit() or not icass_mark.isdigit() or not practical_test.isdigit() or not exam_mark.isdigit():
  print("Enter valid name or marks: ")
else:
  #converting strings to integers
  icass_mark = int(icass_mark)
  practical_test = int(practical_test)
  exam_mark = int(exam_mark)
 	
  #Calculating the final Mark
  finalmark = 0.3*icass_mark + 0.4*practical_test + 0.3*exam_mark
  #Check for boundary values
  if 0 <= icass_mark<=100 and 0<=practical_test<=100 and 0<= exam_mark<=100:
  if finalmark >= 50:
  print (f"Your final mark is : {finalmark:.0f} %")
  print(nameCleared," ","You have qualified for NCV Level 2")
  else:
  print (f"Your final mark is : {finalmark:.0f}%") #Messa
  print(nameCleared," ","Unfortunately, You have not qualified for NCV Level 2")
  else:
  print("Marks cannot be smaller than 0 or bigger than 100") #Error Message for boundary values
	#header explaining what programme is about ✓ (1)
	
	Prompts from use ✓ (1)
	#declaring variables with meaniful names ✓ (1)
	
	Cleaning text ✓ (1)
	
	Check the correct input ✓✓ (2)
	
	Conversions to write type ✓✓ (2)
	
	Formula implemented correctly ✓✓ (2)

Test Table:

Test Mark	Expected Result	Actual Result
Name: funeka sobopha Icass mark: 50 Practical test: 50 Exam mark: 50	Your final is : 50 % Funeka Sobopha You have qualified for NCV Level 2	Enter name: funeka sobopha Enter the Icass Mark: 50 Enter the Practical Test: 50 Enter the exam mark: 50 Your final is : 50 % Funeka Sobopha You have qualified for NCV Level 2 ✓
Name: sonto gama Icass mark: 30 Practical test: 12 Exam mark: 50	Your final is : 30% Sonto Gama Unfortunately, You have not qualified for NCV Level 2	Enter name: sonto gama Enter the Icass Mark: 34 Enter the Practical Test: 12 Enter the exam mark: 50 Your final is : 30% Sonto Gama Unfortunately, You have not qualified for NCV Level 2 ✓

Question 2

Consider the following code:

```
mark = int ("20 percent")
```

Will this statement execute successfully? Support your answer by explain how python interprets string values when converting to integers. (5)

Answer: No, A ValueError will occur because "72 percent "text is not a whole number, and it contains non-numeric characters and cannot be converted to an integer.

Mark Allocation

1 mark for No

1mark for stating an error will occur

1 mark for stating type of error

1 mark for stating its not a whole number or contains non numeric characters

1mark for stating it cannot be converted to integer
